

DAKOTA LIGHT

Steel basket stretcher

Spencer Dakota Light basket stretchers are intended for the recovery and transport of patients. They can be used for rescue operations in those cases where it is necessary to protect patients from side impacts, where it is not possible to intervene with normal transport equipment. The devices can be hoisted with lifting systems applied to fixed anchors, in all cases keeping the stretcher in a horizontal position with respect to the ground, and only if equipped with a Spencer harnessing system. It is not foreseen that the patient be able to intervene on the devices.

Specific features

The galvanized steel structure makes it particularly sturdy and resistant to corrosion

The structure of the frame, confers a wide range of choice of gripping points

The wooden patient floor increases thermal insulation and comfort for the patient

The adjustable footrest and belts allow to minimize patient's movements during recovery
