

Structural modification

COMMAND

Special backpack for fire brigades

The side bags which previously were attached with zips are now fixed to the main bag. Access remains possible from the side. The side and central bags are now attached and the side bags can no longer be removed.

This change has been made to improve the stability of the rucksack during emergency operations and to avoid the potential risk of the zips accidentally opening during use.

TECHNICAL DATA

Dimensioni (mm)	415 x 260 x h520
Volume (L)	55
Weight	4
Available version 10 G	Yes
10 G Weight (kg)	9
